c-Go PC ANALYSIS SOFTWARE + CABLE

c-Go PC analysis software + cable

Do you encounter a problem with your battery or battery charger and have no idea what it is? The c-Go analysis software is a unique solution to analyse your c-Go battery and battery charger. The provided PC cable is easily connected to both the battery charger and the PC on which the software is installed. After the cable is connected the software will automatically do a read-out and analysis of the data on the battery charger. As an extra bonus, this software will then provide some clear solutions to the problems that came up during the analysis. This last feature is great for e.g. mechanics who can now focus directly on the problem and work more efficiently. Our ultimate goal is to reduce the amount of unnecessarily replaced batteries and battery charges.

POSSIBILITIES

1) Read out cumulative data, software version, settings, error history, charging table
2) Automatic analysis of the data with charger test
3) Change charging current/charging curve in the charger
4) Saving data to file
5) Printing the data
6) Deleting cumulative data and history
